Automated Temperature Fan Control System

M. Maheshwari, G. Tejaswini
Dadi Institute of Engineering & Technology, Anakapalle

Abstract:

With the growing demand for energy efficiency and smart automation, an automated temperature-based fan controller is essential for regulating room temperature while optimizing power consumption. This project proposes an Internet of Things (IoT)-based smart fan controller using a temperature sensor to monitor room temperature and automatically adjust the fan speed accordingly. The system employs an LM35 temperature sensor to detect temperature levels and a microcontroller to control the fan speed based on predefined thresholds. If the temperature exceeds a certain limit, the fan speed increases, and if it falls below the set threshold, the fan speed decreases or turns off. Additionally, the system can send alerts to the user via an IoT-based application, allowing remote monitoring and control. This intelligent automation ensures comfort, reduces energy wastage, and contributes to a sustainable environment.

Keywords:

1. Temperature-Based Fan Control
2. IoT
3. LM35 Sensor
4. Smart Automation
5. Energy Efficiency
6. Remote Monitoring

CERTIFICATE

OF PARTICIPATION

This is to certify that Mr./Ms. **Gavara Tejaswini** has attended the conference and presented the paper entitled

Automated temperature fan control system

at the NCTCT-2K25 National Conference on Trends in Computing Technology organized by Department of Computer Science and Engineering in association with CSI Hyderabad Chapter on 15.03.2025. DIET CSI Student Chapter wishes him/her all the best for a bright future.

PAPER ID: NCTCT2K251119
